

# COLONY MEMBERS

Create a webpage called **The Colony**. You will put all the information you see here to introduce each colony member to the world. They are the first explorers of the red planet.

Eureka Bennett

Explorer

Eureka Bennett is a strong and determined young woman who specializes in exploration on Mars. She is a member of a colony established on the red planet and is one of the key members responsible for mapping out and discovering new areas of the planet.

With her expertise in geology and her passion for adventure, Eureka spends most of her time outside the colony, traversing the rugged Martian terrain. She is highly respected by her colleagues for her knowledge and bravery, and is often called upon to lead expeditions to explore the most remote and dangerous regions of Mars.

Despite the challenges and dangers she faces on a daily basis, Eureka is driven by her desire to uncover the secrets of Mars and make a lasting contribution to the understanding of the planet.

Damien Bledsoe

Cyber Expert

Damien Bledsoe is a highly skilled cybersecurity specialist who has made a name for himself in the field of protecting Martian colonies from digital threats. Born and raised on Earth, Damien always had a passion for technology and eventually decided to pursue a career in cybersecurity.

After completing his education and gaining valuable experience in the field, Damien received an opportunity to work on a Martian colony, where the need for advanced security measures was paramount. With his expertise and determination, Damien quickly established himself as a valuable member of the colony's team and has since played a crucial role in protecting the colony's sensitive data and systems from potential cyber attacks.

Despite the challenges and isolation of living on Mars, Damien thrives in his work and takes great pride in being at the forefront of protecting humanity's new frontier. In his free time, Damien enjoys exploring the Martian landscape and tinkering with the latest technology.

Marlon Bradshaw

Information Tech

Marlon Bradshaw is a highly skilled information technology specialist who has devoted his career to working on Mars. He was born and raised on Earth, but always had a fascination with the Red Planet. Marlon studied computer science and engineering in college, and after graduating, he quickly landed a job with a major space exploration company. He was thrilled to be a part of the team that was working to establish a human settlement on Mars.

Marlon's expertise in information technology has been invaluable to the Mars colony. He has designed and implemented complex systems for communication, data storage, and resource management. He also works closely with the other members of the colony to ensure that their equipment and software are always up-to-date and functioning properly.

Despite the challenges of living and working on a distant planet, Marlon finds great satisfaction in his work. He knows that the success of the colony depends on the smooth operation of its technology, and he takes great pride in keeping everything running smoothly. He's also excited about the future of Mars colonization and the new technology that will be developed for it.

Marlon is a dedicated and hardworking individual, and his contributions to the colony have not gone unnoticed. He is respected and admired by his colleagues for his technical expertise and his ability to work well under pressure. He plans to spend the rest of his career on Mars, helping to build a sustainable and thriving human settlement.

Allen Burbank

Computer Scientist

Allen Burbank is a computer scientist and Mars colonist. He was born and raised on Earth, but always had a fascination with space exploration and the possibility of human settlements on other planets. After completing his education in computer science, he applied and was accepted to the Mars colonization program.

Since arriving on Mars, Allen has been working on developing and maintaining the computer systems that are crucial for the functioning of the colony. He has also been involved in research on using AI to improve the efficiency of the colony's operations. In his free time, Allen enjoys exploring the Martian landscape and taking part in the community's efforts to terraform the planet. Despite the challenges of living in such a harsh environment, Allen is excited to be a part of humanity's first steps towards becoming a multi-planetary species.

Robert Davis

Health Specialist

Robert Davis is a fitness and health specialist who has made a name for himself on Mars. He was born and raised on Earth, but always had a fascination with space travel and the possibility of colonizing other planets. After completing his education and gaining experience in the field of fitness and health, he decided to apply for the first manned mission to Mars.

Upon arrival, Robert quickly established himself as the go-to expert for all things related to maintaining physical and mental well-being on the red planet. He created a personalized training program for each member of the colony, taking into account the unique challenges and limitations of living in a Martian environment. He also set up a comprehensive nutrition program, utilizing the limited resources available to them to ensure that the colonists were getting the proper balance of nutrients.

In addition to his work with the colony, Robert also became a respected figure in the international space community. He frequently gave lectures and presentations on the importance of fitness and health in long-duration space travel and the potential challenges that future explorers may face.

Robert's passion for fitness and health, combined with his expertise and dedication, has made him a vital member of the Martian colony and a respected figure in the space community. He continues to work tirelessly to ensure that the colonists are able to maintain their physical and mental well-being in an inhospitable environment.

Raul Dominguez

Photographer

Raul Dominguez is a skilled photographer who specializes in capturing the unique and otherworldly landscapes of Mars. He has always had a passion for photography and a fascination with the red planet.

After years of studying and honing his craft, Raul was finally given the opportunity to join a manned mission to Mars as the official photographer. He spent months on the planet's surface, capturing stunning images of its rugged terrain, towering dust storms, and mysterious rock formations.

Despite the harsh conditions and limitations of working on a planet with a thin atmosphere and frigid temperatures, Raul was determined to capture the beauty of Mars in a way that had never been seen before. His photographs have since been featured in galleries and exhibitions on Earth and have helped to inspire a new generation of space exploration.

Raul continues to work with NASA and other space agencies, capturing images of other planets, moons, and space phenomena. His work is widely recognized and praised for its ability to capture the stark beauty of the cosmos.

Brian Dunn

Supply Specialist

Brian Dunn is a skilled supply chain specialist who has made a name for himself in the demanding field of Martian logistics. Growing up on Earth, Brian always had a passion for space exploration and a desire to be a part of humanity's push to become a multi-planetary species.

After completing his studies in logistics and supply chain management, he quickly rose through the ranks at a major aerospace corporation and was eventually offered a position on the first manned mission to Mars. As the chief supply chain officer for the mission, Brian is responsible for ensuring that all of the necessary materials and equipment are delivered to the colony on time and in good condition.

Despite the harsh conditions and constant challenges that come with working on the red planet, Brian thrives in the high-pressure environment and is considered a vital member of the Mars colony team.

Lyla Fishburn

Food Scientist

Lyla Fishburn is an accomplished botanist and food scientist who was handpicked to be a member of the first human colony on Mars. She has spent the last several years leading the effort to establish sustainable food production on the Red Planet.

Lyla's expertise in hydroponics and genetic engineering has been crucial in the development of new crops that can thrive in the harsh Martian environment. She has also played a key role in designing and maintaining the colony's complex food systems, ensuring that the inhabitants have a reliable source of nutritious food.

In her free time, Lyla enjoys experimenting with new recipes and cooking techniques, and is known for her inventive use of Martian-grown ingredients. She is passionate about promoting self-sufficiency and reducing the colony's dependence on supplies from Earth.

Despite the challenges of living on a new planet, Lyla is excited about the opportunity to make history and pave the way for future generations of Martian settlers.

Gregory Hicks

Explorer

Gregory Hicks is a brilliant and ambitious astronaut who has dedicated his life to the exploration of Mars. With a Ph.D. in Astrophysics and years of experience in space travel, he is considered one of the leading experts in the field.

Hicks first rose to fame after leading a successful mission to Mars, during which his team discovered the first evidence of water on the planet. Since then, he has led multiple expeditions to Mars, each time pushing the boundaries of what is possible and uncovering new and exciting information about the planet.

Despite the dangers and challenges of space travel, Hicks is driven by a deep curiosity and passion for discovery. He is always looking for new ways to push the limits and uncover the secrets of Mars, and is determined to be the first human to set foot on the planet's surface.

Hicks is a respected leader and a true pioneer in the field of space exploration. His work has not only expanded our understanding of Mars but also inspired a new generation of scientists and explorers to reach for the stars.

Rita Johnson

Physician

Rita Johnson is a brilliant and ambitious medical doctor who specializes in the unique challenges of practicing medicine on Mars. She has always been fascinated by the red planet, and was determined to be a part of the first manned mission to Mars. After completing her medical training, she was selected to be the chief medical officer on the first manned mission to the planet, and has been living and working on Mars for the past five years.

Rita's extensive knowledge of the planet's harsh environment has made her an invaluable member of the team, and she has been instrumental in keeping the crew healthy and safe. She has also been conducting research on the effects of long-term space travel on the human body, which has the potential to greatly benefit future space exploration.

Despite the isolation and harsh conditions, Rita loves every aspect of her work and is committed to making a meaningful impact in the field of space medicine.

Lex Muller

Commander  
Aerospace Engineer

Lex Muller was a man with a vision. He had always been fascinated by the idea of space exploration and the possibility of human settlement on Mars. After completing his studies in aerospace engineering, he quickly rose through the ranks at a major space exploration company. His passion and leadership skills caught the attention of the company's management, and they soon appointed him as the head of their Mars colonization program.

Under Lex's guidance, the program made significant progress. He led a team of engineers, scientists and astronauts to design and build the first self-sustaining human settlement on Mars. His team successfully developed new technologies for extracting and utilizing resources on the planet, and established a functioning infrastructure for the colony.

As the colony grew, Lex became known as a charismatic leader, who was able to inspire and motivate his team to overcome the many challenges they faced. He was respected by his team for his courage, determination and ability to think strategically.

As the leader of the first human settlement on Mars, Lex's name went down in history as one of the greatest explorers and leaders of our time. His story of human determination and spirit of adventure continues to inspire generations to come.

Ben "Goose" Necker

Transportation Tech

Ben "Goose" Necker is a skilled transportation specialist who has made a name for himself on Mars. He was born and raised on Earth, but always had a fascination with space travel and the possibilities of life on other planets. He trained as a pilot and engineer, and eventually landed a job as a transport specialist for a company that specializes in Martian colonization.

Goose quickly proved himself to be an expert in navigating the treacherous terrain of Mars, and was soon promoted to lead transport pilot. He is known for his ability to safely and efficiently transport goods and people to and from the various colonies on the planet. Despite the challenges he faces on a daily basis, Goose has a passion for his work and is always looking for ways to improve the transportation systems on Mars. He is respected and admired by his colleagues for his dedication and expertise.

When he's not working, Goose enjoys exploring the Martian landscape and studying the planet's unique geology and history. He's also an avid amateur astronomer, and spends many nights stargazing and making observations of the Martian sky.

Goose's ultimate goal is to one day establish a permanent and self-sustaining human settlement on Mars, and he's determined to use his skills and expertise to make that happen.

Lizzy O'Brady

Well-Being Specialist

Lizzy O'Brady is a dynamic and charismatic figure in the Martian colony. As a specialist in social relationships, she has played a crucial role in building and maintaining the strong community spirit that has helped the colony thrive. She has a unique ability to connect with people from all backgrounds and cultures, and her infectious energy and positive attitude have made her a popular leader among the colony's residents.

Lizzy arrived on Mars as part of the first wave of settlers and quickly established herself as a vital member of the community. She has been involved in a wide range of activities and initiatives, from organizing community events and festivals to mediating disputes and providing counseling services.

Despite the challenges of life on Mars, Lizzy has always been able to find the silver lining and has been a constant source of inspiration and motivation for her fellow colonists. She is deeply committed to making the colony a better place for everyone and is always looking for new ways to bring people together and build connections.

Lizzy is a strong believer in the power of community and the importance of social connections. She is dedicated to helping the colony thrive and will stop at nothing to ensure that everyone is happy and fulfilled on this new world.

### Malcomb Richmond

Civil Engineer

Malcolm Richmond was always fascinated by space and the possibilities it held for humanity. After earning his degree in civil engineering, he knew that his true calling was to work on the colonization of Mars. After years of hard work and dedication, he finally landed his dream job as a lead engineer on a team tasked with building the first sustainable Martian colony.

With his expertise in structural design and experience in the harsh conditions of the Martian environment, Malcolm quickly established himself as a valuable member of the team. He led the design and construction of the colony's housing units, power systems, and water treatment facilities, and his innovative solutions to the unique challenges of building on Mars earned him respect and admiration from his colleagues.

Despite the many obstacles they faced, Malcolm and his team were able to successfully establish the colony, and it quickly became a model for other Martian settlements. Malcolm continued to work on the colony, always striving to improve and expand it, and his work laid the foundation for a thriving Martian community.

With his contributions to the colonization of Mars, Malcolm Richmond will be remembered as a pioneer and visionary in the field of civil engineering, and his legacy will live on for generations to come.

### Catherine Rizzo

Bio-Tech

Catherine Rizzo was born and raised in a small town on Earth, but always had a fascination with space and the possibility of life on other planets. She studied biotechnology in college and eventually landed a job with a private space exploration company that specialized in terraforming and colonizing Mars.

As a biotechnology specialist, Catherine's job was to design and implement systems for growing crops and raising animals on the red planet. She worked tirelessly to develop new strains of plants and animals that could survive and thrive in the harsh Martian environment.

Despite the challenges and difficulties of living on a distant planet, Catherine quickly fell in love with Mars and the unique opportunity to shape the planet's ecosystem. She threw herself into her work, dedicating her life to making Mars a more habitable place for future generations.

Catherine's efforts have paid off, and today she is considered one of the leading experts in biotechnology for Mars colonization. She continues to work tirelessly on new projects, always pushing the boundaries of what is possible. Her ultimate goal is to make Mars a second home for humanity and a planet that is capable of supporting human life.

### May Romano

Comm Specialist

May Romano is a skilled communications specialist who is currently working on a mission to establish a colony on Mars. She is a determined and ambitious woman who has always been fascinated by the possibilities of space exploration.

Growing up, May was a curious and inquisitive child who loved to tinker with electronics and communications equipment. As she got older, she decided to pursue a career in engineering and eventually landed a job at a leading aerospace company.

When the opportunity to work on the Mars mission presented itself, May jumped at the chance. She has been responsible for setting up and maintaining the communications systems that allow the colony to stay in contact with Earth.

Despite the challenges and dangers of living on a hostile planet, May is excited to be a part of such a historic endeavor. She is determined to make sure that the colony's communications systems are always up and running, so that the team can stay connected and work together to make the dream of a Martian colony a reality.

Zane Shew

Surveyor

Zane Shew is a skilled survey mapping specialist who has dedicated his career to exploring and mapping the surface of Mars. Growing up, he was always fascinated by the Red Planet and spent countless hours reading about the latest discoveries and advancements in Martian exploration.

After earning his degree in planetary geology, Zane quickly rose through the ranks at a major space exploration company and was eventually selected to be part of the team responsible for mapping the Martian terrain. He spent several years on the planet, using cutting-edge technology to map out the landscape and search for signs of past or present life.

Despite the harsh conditions and long hours, Zane thrived on Mars and considered it his second home. He is known for his attention to detail and his ability to think outside the box when it comes to solving problems.

Zane's work has greatly contributed to our understanding of Mars and has laid the groundwork for future manned missions to the planet. He is considered one of the leading experts in his field and continues to be a vital member of the Mars exploration team.

Moses Smith

Construction Engineer

Moses Smith is a skilled construction worker with a passion for building on other planets. He grew up in a small town on Earth, but always dreamed of working on a Martian colony. After years of hard work and dedication to his craft, Moses finally got his chance. He was chosen to be part of the team responsible for constructing the first permanent human settlement on Mars.

Moses quickly proved himself to be an asset to the team, with his exceptional knowledge of construction techniques and his ability to think outside the box. He was responsible for designing and building many of the colony's key structures, including the main living quarters and the greenhouse that would provide food for the settlers.

Despite the harsh conditions on Mars, Moses thrived in his new environment. He quickly adapted to the thin atmosphere and the constant sandstorms, and was always willing to lend a hand to his fellow workers. He quickly became a respected member of the colony, and was often called upon to solve problems and come up with innovative solutions.

Despite the challenges of working on Mars, Moses couldn't be happier. He had finally realized his lifelong dream of building on another planet, and was helping to pave the way for humanity's expansion into the stars.

Sabrina White

Nurse

Sabrina White is a highly skilled and experienced nurse with a passion for innovation in healthcare design. She has spent the last decade working on designing and implementing medical facilities for the first human settlers on Mars.

With her extensive knowledge of both nursing and space-related technologies, Sabrina is uniquely qualified to meet the challenges of providing medical care in an extraterrestrial environment. Her dedication to her work has earned her the respect and admiration of her colleagues and patients alike.

Despite the difficult conditions on Mars, Sabrina is determined to make the red planet a place where people can live healthy and fulfilling lives.

Logan Williams

Graphics Designer

Logan Williams is a talented graphics designer who specializes in creating stunning visual designs for Mars-based companies. He was born and raised on Mars, and from a young age, he showed a natural inclination towards art and design. He spent his formative years honing his skills and eventually landed a job at one of the top design firms on Mars.

With his unique perspective and understanding of Mars' landscape and culture, Logan quickly made a name for himself in the industry. He is known for his ability to create designs that seamlessly blend Martian elements with modern design principles. His work has been featured in numerous exhibitions and has won several awards.

Logan's ultimate goal is to help establish Mars as a hub for creative and innovative design. He believes that by showcasing the beauty and potential of the Martian landscape through his work, he can inspire others to see the planet in a new light and help drive its development.

Aside from his work, Logan is an avid explorer and spends his free time traveling to different parts of the planet to gather inspiration for his designs. He is also a strong advocate for sustainability and incorporates green technologies and practices into his work whenever possible.

Becky Wilson

Psychologist

Becky Wilson is a colony member on Mars, where she specializes in the field of psychology. She is responsible for helping to maintain the psychological well-being of the colony members, as well as conducting research on how living in an extraterrestrial environment affects human psychology.

She is also a key member of the colony's team that is responsible for selecting and training new members. With her expertise in psychology and her experience living in a colony on Mars, Becky is a valuable asset to the colony and plays a crucial role in its success.

She is excited to be a part of this journey, and says that everyone seems to be adapting very well to their new surroundings. "It will be interesting to see us all in a year, and how we have evolved from this extraordinary experience."
